Project Capabilities

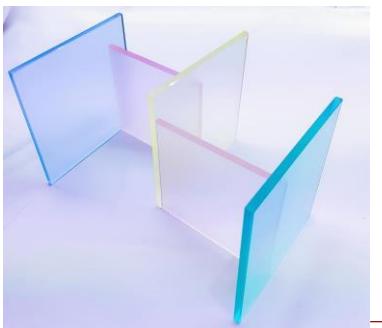

Millwork & Carpentry

Regardless of the technology that might be applied to create special finish, our carpentry has years of experience crafting and assembling the finest furniture and fittings.

Sofa & Upholstery

The upholstery team are engaged in almost every project to add the exquisite touches of leather and fabric to all kinds of millworks as well as loose furniture. Meanwhile, we are now under developing our Sofa Dept.

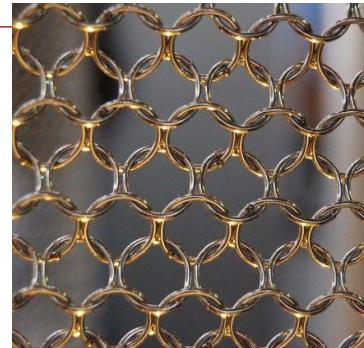

Glass

At DDG Glass factory, we can produce various incredible glass with designs up to super jumbo size.

Metal & PVD

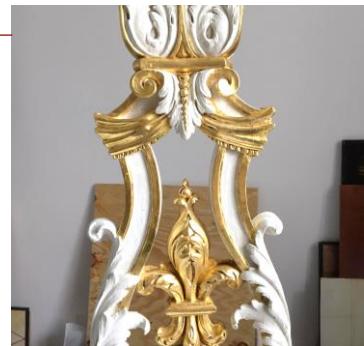

We have precision metal laser cutting, robot welding and 3D CNC laser cutting machine open up more possibilities to create complex and ornate elements of both solid and hollow metal.

Besides, our PVD coating have more than 100 different colours to customize the specific colour for your projects.

Painting & Coating

Alongside our dedicated painting booths, our fully automated painting line guarantees perfect painting application to any surfaces.

Veneer

Our extensive veneer department begins with hand selecting the best cuts veneer from European sources. Then we finish it with any specification with the latest technology of our veneer production line.

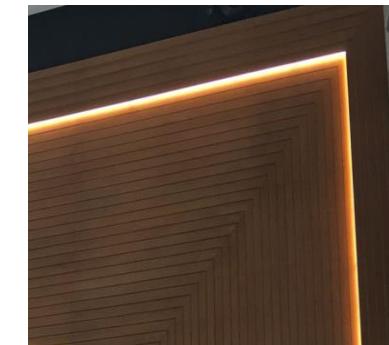

Acrylic

Besides acrylic cutting and polishing, we are capable to do duo-curved acrylic.

Solid Surface/Stone Processing

With state-of-the art of 5 axis stone processing machine we can shape any solid surface or stone.

LED Development & Electrical

As LED technology advanced, our LED development team constantly examining ways in which we can improve integration into our furniture and fittings.

Packing

Good quality packing is also one of our upmost important procedures so to deliver our product to clients.

Truly In-House
One Stop
Production Facilities

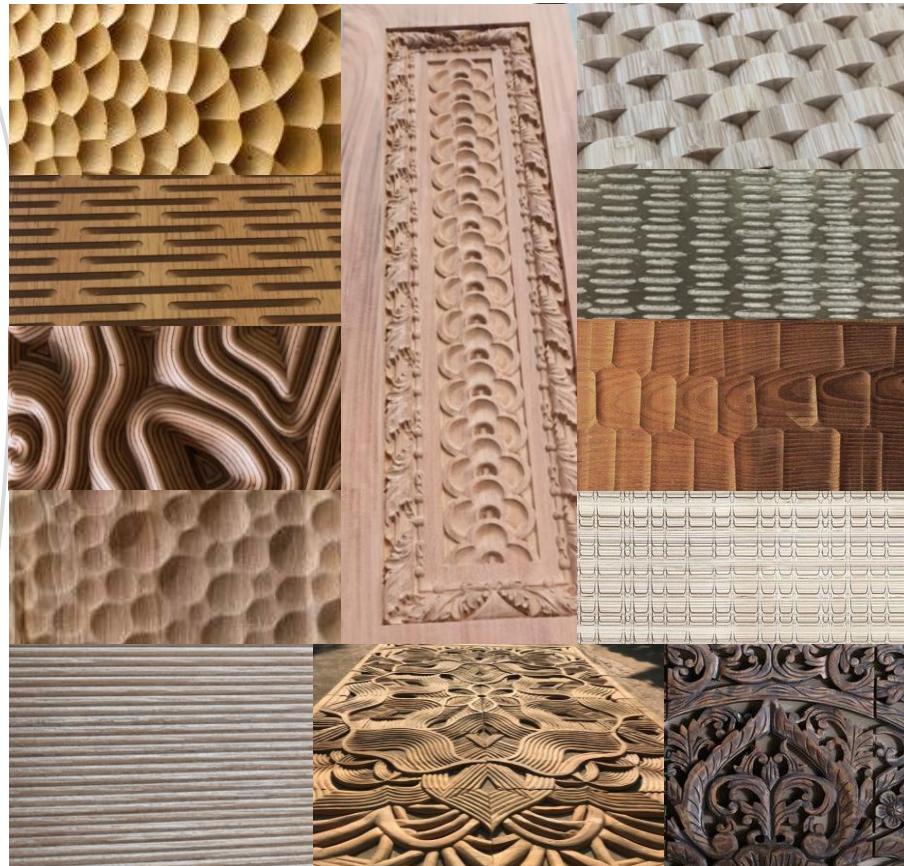

Millwork & Carpentry

Our wood products are able to meet worldwide requirement especially environmental requirements as we are using sustainable wood material with certificate of CARB and TSCA.

5 Axis CNC Router

It showcases another technology leadership of carpentry as this tool delivers multi-axis capability for specific 3D design requirements for your projects with high efficiency.

Working Size:
6480mm x 1560mm x 195mm

Panel Saw

Working Size: 4500mm x 4300mm

Edge Bending

Working Size: 6400mm (length)

Moulding Machine

Working Size: 1200mm x 730mm

Sofa & Upholstery

Our sofa making dept is very stringent from material used , wrapping, foaming, framing, sewing & finishing for any shapes of sofa seating.

We make sure that the quality of the sofa is comfortable and durable for clients.

Glass

We have a full range of glass processing including:

Digital Printing Up to 6000mm with 720dpi

UV Printing Up to 6000mm with 2400dpi

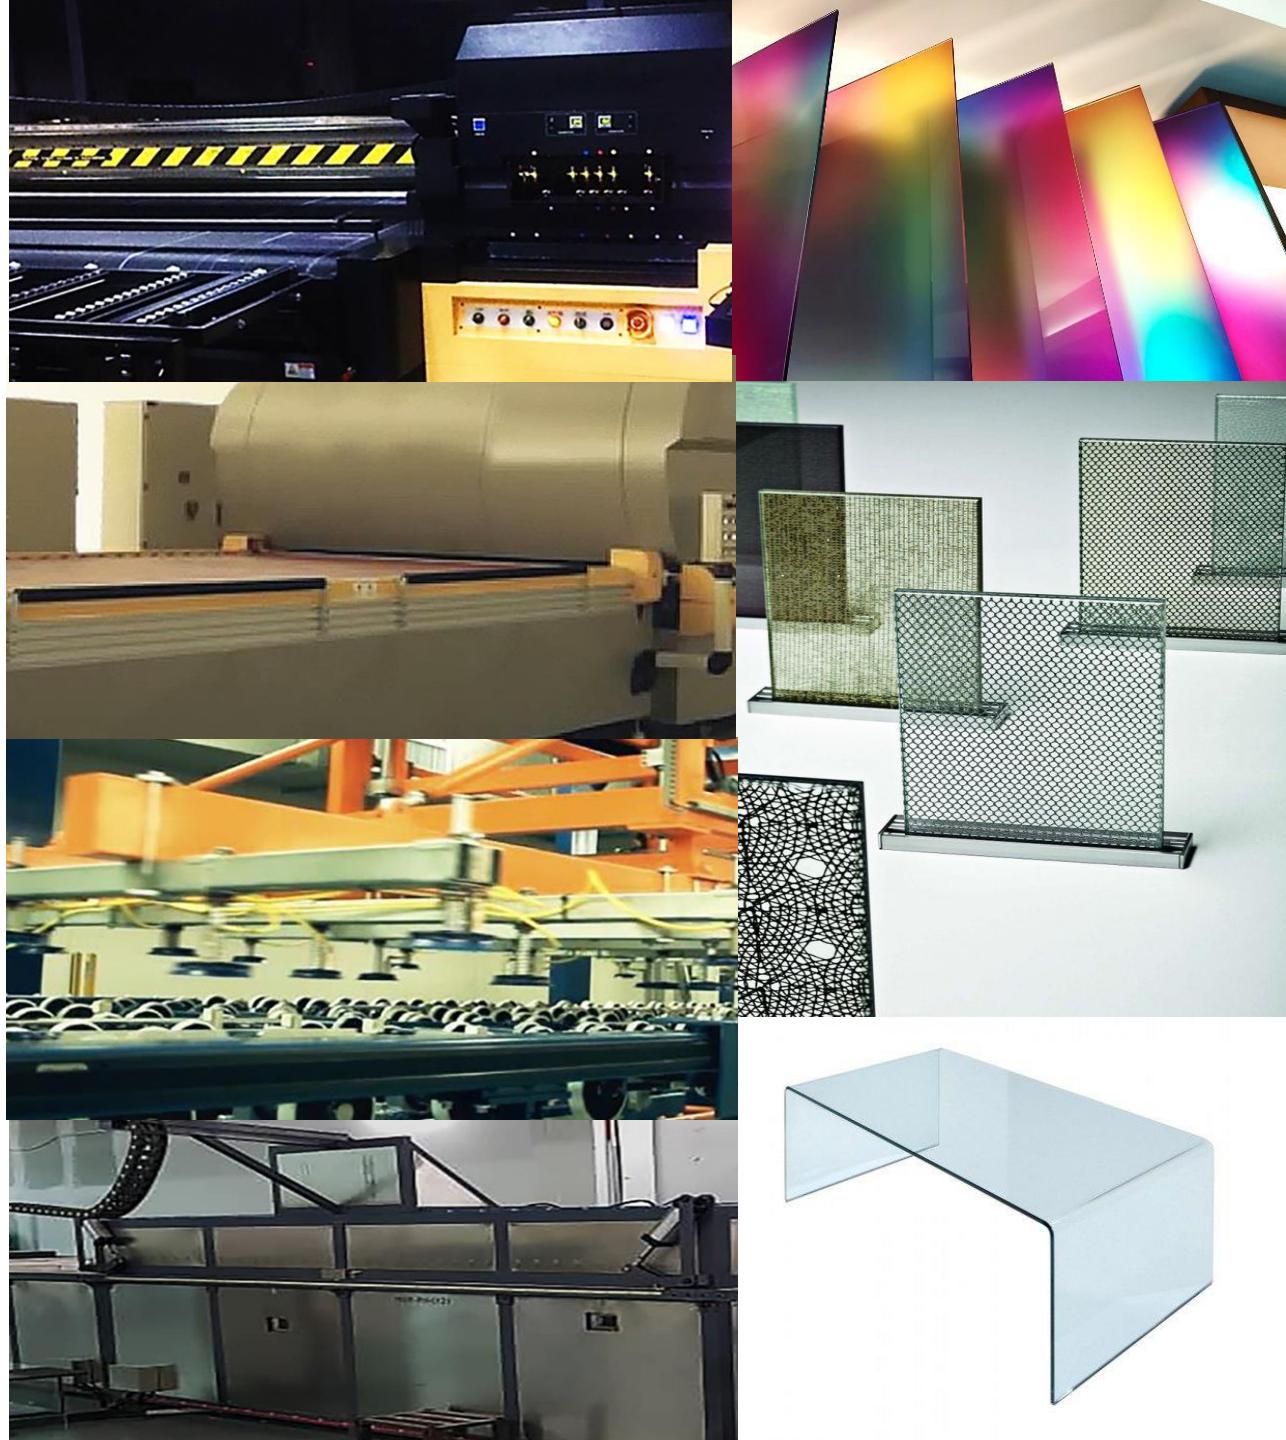

Laser Engraving Up to 6000mm

Curved Glass Max R800, up to 3800mm thickness 3-15mm

Laminating Up to 6000mm

Tempering Up to 8000mm

DGU Up to 6000mm

Metal

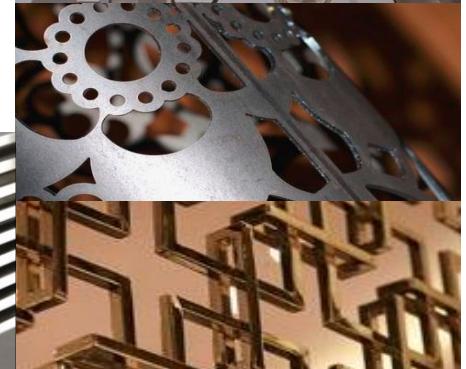

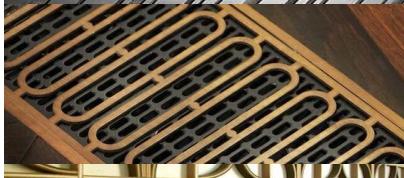

We have water jet, laser cutting and tube cutting (3D) to cater to both simple and customized design with amicably precision.

Working size

Waterjet Cutting: 4000mm x 2000mm

Laser Cutting: 6000mm x 2000mm

3D Tube Cutting:
6500mm (Length) x 200mm (Diameter/Thickness)

Metal

Our metal dept have different various process (welding, polishing, milling, v-cut, turning, press-brake) in order to produce the high quality finishing of metal components for the project.

Robot Welding

It complement the speed and quality of welding.

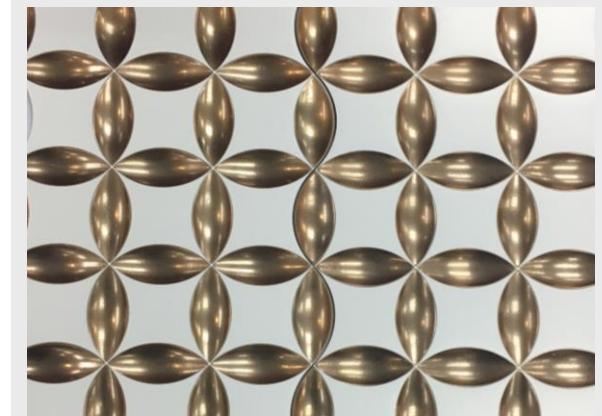

Position repeatability: 0.02mm

CNC Milling

Creates high precision components.

Working size:
2000mm x 520mm x 540mm

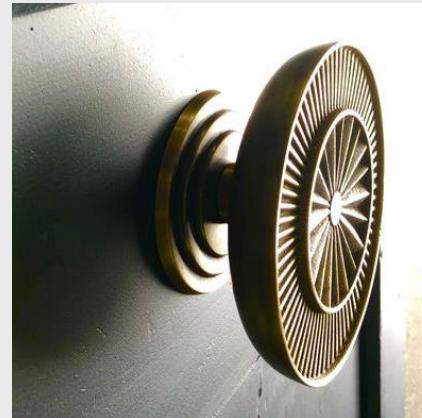

Metal

Our metal dept have different various process (welding, polishing, milling, v-cut, turning, press-brake) in order to produce the high quality finishing of metal components for the project.

Metal Turning

It can achieve very fine detailing of metal for your design.

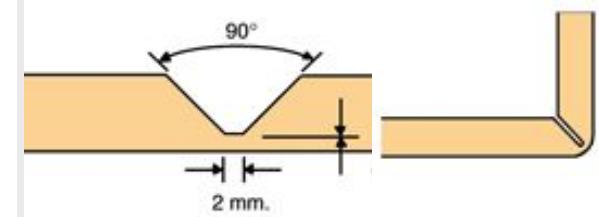

Working size:
1200mm x 520mm x 540mm

V-Cut & Brake Press

Important steps for 90 degree shape edge.

Working size: 6000mm x 1500mm

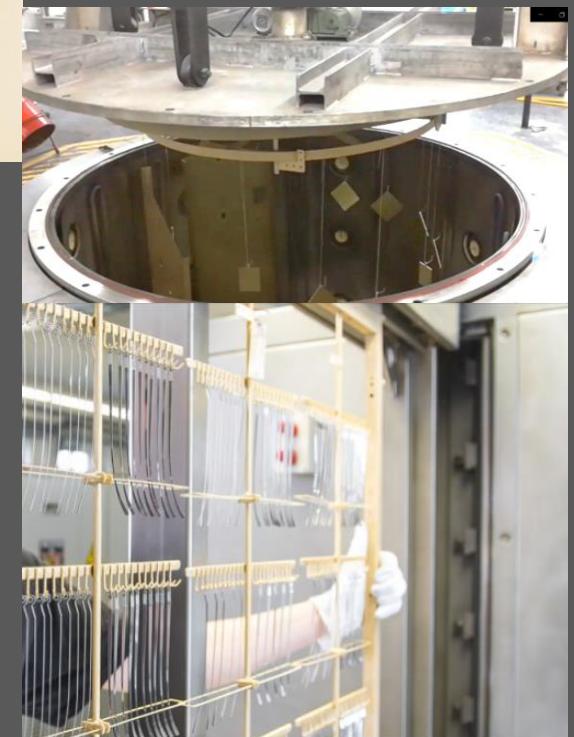

PVD

Our PVD colours have **more than 100 different tone** of gold, copper, silver, platinum and etc, adding variety of colour to your design.

It come with **mirror**, **hairline** or **cross hairline** which the possibilities can be various.

Working size : 2000mm x 6000mm

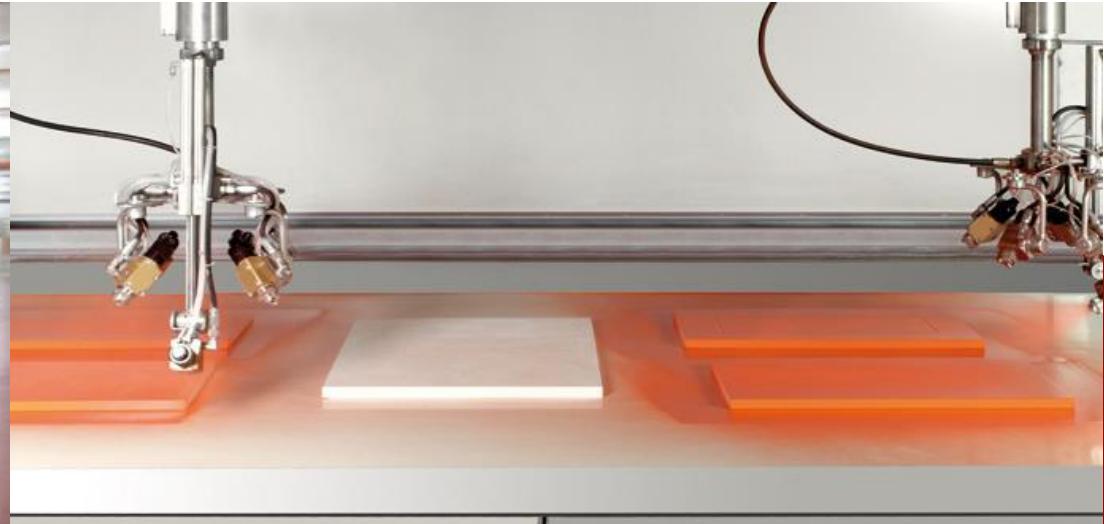

Painting & Coating

We have a very experience team in charge of the colour matching and development of different paint and coating to achieve the effect of the design.

Besides, our fully automation spray & coating line is committed to deliver consistent paint quality in a shorter time.

Working Size

Spray Line: 4400mm x 1600mm x 100mm

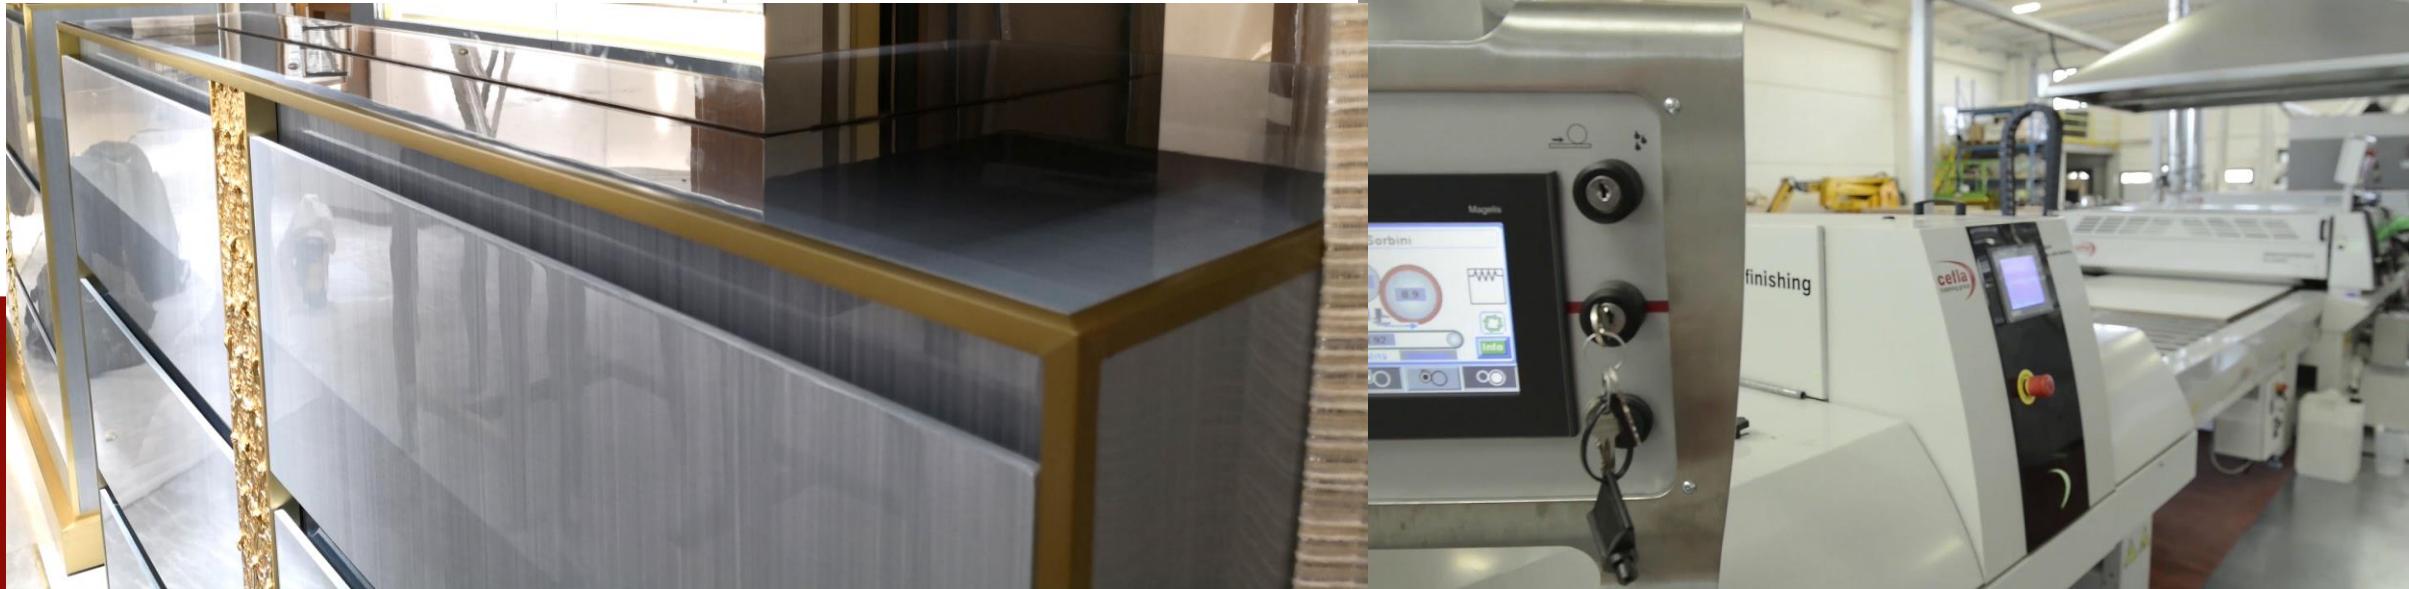

Painting & Coating

We have a very experience team in charge of the colour matching and development of different paint and coating to achieve the effect of the design.

Besides, our fully automation spray & coating line is committed to deliver consistent paint quality in a shorter time.

Working Size

Roller Coater: 3000mm x 1600mm x 100mm

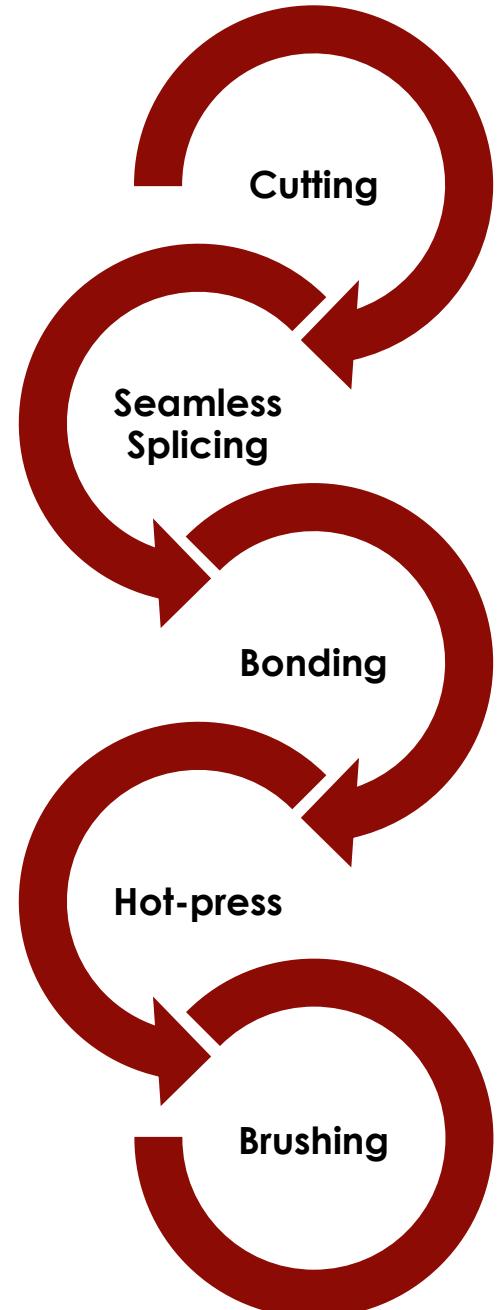

Painting & Coating

We have in house **spray room and polishing table** in order to produce the highest quality of painting product for the project.

Veneer

Our one-stop veneer production line together with top quality veneer from Europe is our quality commitment to our clients.

Acrylic

Besides normal acrylic cutting and edge polishing,
we can do laser cutting, engraving and acrylic forming.

Working size

Laser cutting & engraving:
3000mm x 1500mm

Edge polishing:
4200mm (length)

Acrylic Forming:
1220mm x 2440mm x 10mm

Stone Processing

Our 5 axis stone processing facilities able to do any customized profiling and 3d craving to meet your design.

Working size:
2850mm x 2050mm x 900mm

LED Development & Electrical

LED is one of the important components for both interior and exterior.

We have a team of LED development technically matching your electrical specification with design.

Besides, we are able to meet respective electrical worldwide requirements.

Packing

Packing is one of the important elements to deliver good quality of products to our customer.

We have specialize team in charge of the goods packing and we kept the crate in our warehouse waiting for container loading.

We use high quality packing wood to protect the goods and to prevent the goods from damage during transportation.
